## Environmental Health Test Instruments

Corporate Member of the Canadian Institute of Public Health Inspectors  
Pool Water Testing Instruments Special Pricing for CIPHI Members

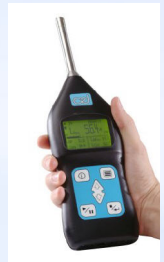

The *Microdust Pro* is a portable, real time monitor for assessing the concentration of suspended particulate matter, and is probably the most versatile instrument available with the ability to measure from  $1\mu\text{g}/\text{m}^3$  to  $2500\text{ mg}/\text{m}^3$ . It is the only handheld real-time dust monitor on the market capable of graphically presenting variations in dust concentration on a real time scrolling graph - no longer is it necessary to wait to analyze results on a PC. Ideal for environmental measurement as well as occupational health and safety surveys.

CIPHI Price: CAS-176000A - Microdust Pro Standard **\$5803.00**

The New *CEL-400 Series Real Time Noise Analyzers* are an advanced and comprehensive instrument family for a wide range of applications. They have been designed for convenience and ease of use in many popular tasks. From simple workplace noise surveys to full community noise audits the new CEL-400 series can do it quickly and easily. The CEL-430, CEL-450 and CEL-490 use advanced digital signal processing technology to enable the meters to cover the whole audible sound range in a single span. This eliminates the need to select the best range for a measurement since everything is covered from the quietest quiet to the loudest loud.

CIPHI Price: CEL-430.A1 - CEL -430 Sound Level Meter **\$3225.00**

The *CEL-300 Series Sound Level Meters* cover 3 measurement ranges from 30 to 140 dB to ANSI Type 2 specifications. Choose from A or C frequency weightings and Slow, Fast or Impulse time weightings. Select Q as 4, 5 or 6 for dose measurements. Overall results for the maximum, minimum and average noise levels are saved together with the ability to set 2 threshold cutoff levels and a single criterion level for all noise dose calculations. Begin recordings immediately or, with the CEL-360, set a delayed start and stop time up to a month in advance for the instrument to record automatically.

CIPHI Price: CEL-320 - CEL-320 Sound Level Meter **\$1836.00**

The *CEL-200 Series Sound Level Meters* are inexpensive instruments for noise checks in the workplace or general noise measurements. With simple to understand functions and large LCD screens, they are ideal instruments particularly for personnel new to noise measurement or where regular spot checks on workplace noise may be required. The CEL-231 is most suitable for steady noise levels, the CEL-254 for steady and fluctuating noise levels or intermittent and irregular noise levels.

CIPHI Price: CEL-231 - CEL-231 Sound Level Meter **\$756.00**

The new *Apex Personal Sampling Pumps* have been developed to provide sampling capabilities between 0.005 and 5 l/min. They are suitable for a wide range of applications and offer many advanced features not found in comparable products. Two main models are available in the range; the Apex Standard and the Apex Pro. Ease of use and utmost reliability have been uppermost in the designer's minds during the development of these quality pumps from Casella CEL. Digital circuitry ensures precise and constant control of the flow rate.

CIPHI Price: CAS-182000BAA - Apex Standard Personal Sampling Pump **\$844.00**

All instruments are supplied with a test certificate confirming calibration. Certified check standards are also available.

For more information on these instruments please e-mail us at [aquatic@aquaticlife.ca](mailto:aquatic@aquaticlife.ca), visit our web site at [www.aquaticlife.ca](http://www.aquaticlife.ca) or call us at 1 800 409 8378. Leasing options are available.
